01

Project Introduction

Project Introduction of Bolt EV

- Shanghai**
 Headquarters of MATODATAS , project plan , 3D model, report making

- California**
 Purchase, scan, teardown, registration in Detroit, joint sales agreement with Munro

- Fukuoka**
 Technical support for new energy technology research, material testing, etc.

- Germany**
 European automotive industry, multi-level business cooperation, data support

Basic Information of Bolt

Battery Capacity

Range

60 kWh

Curb Weight

383km

1625 kg

Bolt EV

60 kWh

2017.03 California

383km

01

In March , 2017 we bought Bolt EV in North America and dismantled it in California.

02

Curb Weight	1625kg
Length Width Height	4170/1770/1600mm
Wheelbase	2600mm

03

Range	383km
Top Speed	225 km/h
Acceleration 0-96km/h	6.3s
Power	203 ps

04

Battery capacity	60 kWh
Nominal voltage	350V
Battery weight	435kg (23% of all)
Battery system volume	285L
Volume energy density	208Wh / L
Mass energy density	136Wh / kg

05

Permanent Magnet Motor
 The maximum output power is 150 kW
 The maximum torque is 360 N m
 It consists of 288 "flake" LG lithium batteries with nominal capacity of 55 Ah, nominal voltage of 3.75 V and system power of 59.4 kWh (288 * 55 Ah * 3.75 V). The cooling effect is good. The temperature difference of each batteries is controlled at 2 degrees Celsius in winter. The batteries are generally guaranteed for 8 years or 100,000 miles.

02

Project Progress

Teardown

in California

03

3D Model & Point Cloud

3D Model

Data Accuracy Requirements

- ◆ Chassis, BIW, interior and exterior to meet the requirements of mold opening (black box / grey box external contour)
- ◆ The accuracy of point cloud and data is below 0.5mm.
- ◆ The contour accuracy is controlled below 1mm.
- ◆ The key parts' holes and hard points accuracy are controlled in 0.2mm (Annex).

Point Cloud
